

Case Study on School Garden Projects

Focus on Switzerland, Ethiopia, Peru and Myanmar

Objectives

- Analysis of the theoretical and practical tools and methods to measure the school garden impact on children regarding :
- Bring different school garden projects together, in order to extract the main SWOT regarding :

Nutrition and Food Security

Civic Participation and Engagement

Environmental Consciousness

Material and Methods

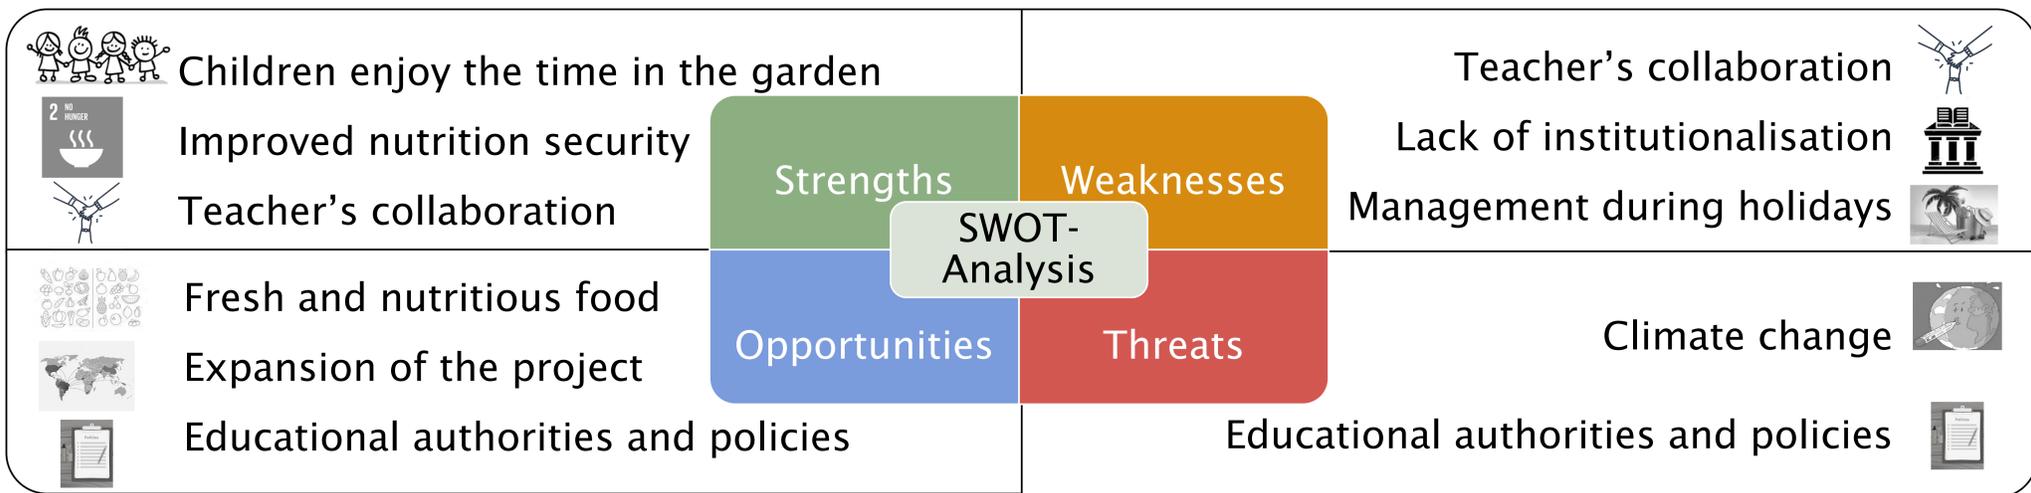

Literature review on the three impact domains

Semi-structured interviews with 11 key experts in Switzerland, Ethiopia, Peru and Myanmar

Children's homework collected in Switzerland, Peru and Myanmar

Data analysed with MAXQDA and SWOT

Selected Results

Conclusion

- ↕
- Many parameters to take into consideration
 - Tools available, but not adapted to school gardens

- Same issues in different projects
- Limited resources
- Very flexible structure with high potential for knowledge transfer
